

# Tutorial: Print with Windows Photo Viewer

*This tutorial is for PC owners and works best with images 8x10 inches or smaller that you intend to print from your desktop printer.*

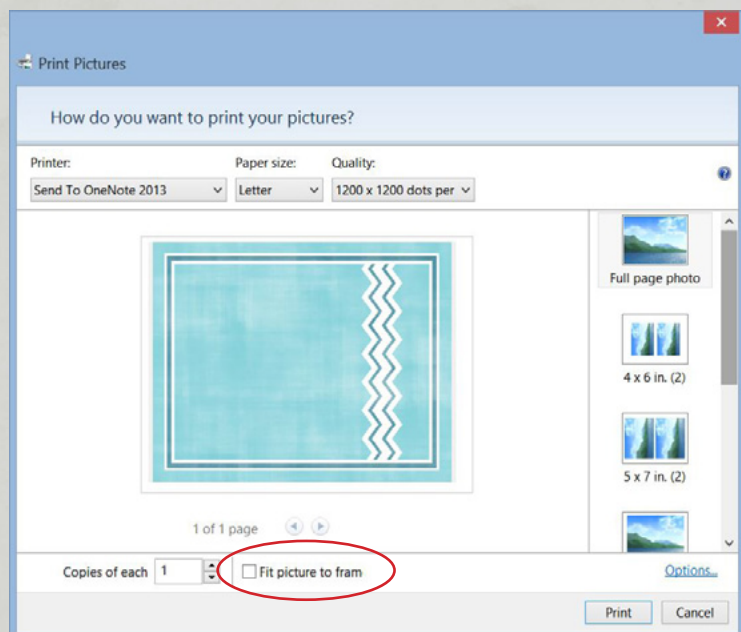

1. Start by locating the file. It will be in Downloads, unless you specified a different location when you purchased the file or moved it after downloading.

2. Double click on the file name to open the image in Windows Photo Viewer. On the top menu, click **Print** and choose Print.

3. A dialogue box will open. Choose the printing size and number of copies. You can also specify the printer and paper size. At the bottom, **uncheck Fit Picture to Frame**. Leaving it checked will distort the proportions of the image.

When all the settings are ready, click **Print** and enjoy your artwork! If you have any questions, please contact The Printable Marketplace.
